SportzSuite

SportzSuite is a collection of web-based applications and integrations available to subscribers that utilize Sportzcast technology

Additionally, full hardware warranty & technical support is included.

ScoreDesigner

ScoreDesigner is the next generation of one of Sportzcast's most beloved and relied upon applications for custom, easy graphic overlays featuring real-time scoreboard data- LiveSportzCG.

While LiveSportzCG was limited to Windows PCs, ScoreDesigner is browser based, enabling use on any platform. ScoreDesigner includes all of the simple yet powerful features of LiveSportzCG allowing users with virtually no graphic or broadcast design background the ability to quickly and effectively create broadcast graphic overlays.
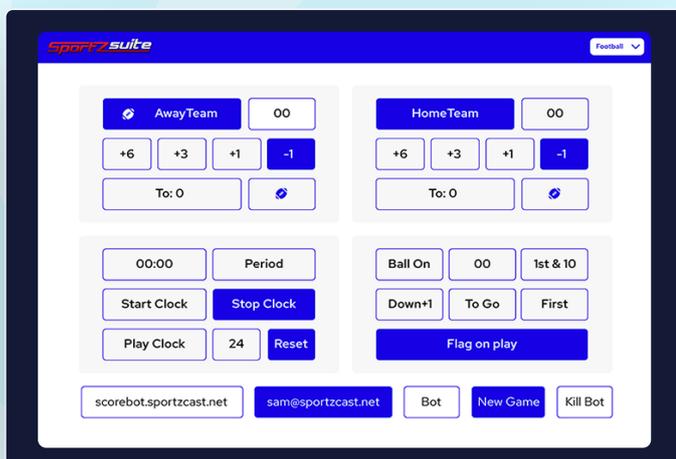

Templates are included for each sport that can be used as is, or easily modified to suit your productions. You can also create graphics from scratch and save them to your account, where they will then become available anytime you log into your account from anywhere.

ScoreApp

The ScoreApp essentially acts as a manual Scorebot for anytime a traditional scoreboard or connection is unavailable. Sportzcast clients can open a web browser on any connected device, log into their SportzSuite account, chose a sport type, and their device becomes a scoreboard controller, able to send manual game data to the Sportzcast servers that will appear just like Scorebot data.

This is a perfect application for Sportzcast clients traveling on the road to venues where they may not have access to connect to the venue scoreboard controller, but still want to utilize their typical setup. Simply open the ScoreApp web app and keep score manually.

This application is also used heavily in the traveling tournament industry to provide game data from locations that have no physical scoreboards at all.

Integrations

In addition to internally developed software, Scorebots are compatible with numerous 3rd party software applications. Sportzcast has spent years working with our integrated partners to deliver real-time scoreboard data into various destinations.

So if you already own broadcast, editing, or replay software systems and are looking to get automated scoreboard data into your workflows - you can accomplish that by simply adding a Scorebot to your equipment.

For many of our integrated partners, you can connect a Scorebot locally or via the cloud to receive real-time data by logging in with your Sportzcast credentials inside their software. However, all Scorebots are also capable of distributing standardized scoreboard data in various formats that software systems can accept, such as .XML, JSON, and more.
